The year of analysis	The number of products sold total.	Average net avoided emissions per product multiplied by number of products sold.	Avoided emissions per product sold, which accounts for the avoided emissions of the reference scenario, and the added emissions of operations, delivery, and packaging.	The emissions a new comparable product would generate, which are then potentially avoided, multiplied by the category-specific replacement rate.	The emissions generated by the delivery of an average product.	The emissions generated by the delivery of an average product.	The emissions generated by the packaging of an average product.	The total emissions of new comparable products, when accounting for the number of products sold and the replacement rate.	The total emissions from deliveries. Average deliveries impact per sold product multiplied by products sold.	The total emissions from operations. Based on Willhaben's corporate carbon footprint.	The total emissions from packaging. Average packaging impact per sold product multiplied by products sold.

The Equation											
	Total Net Avoided	Reference Scenario: Total Cradle-to-Consumer	Replacement Rate	Total Deliveries Impact	Total Business Operations Impact	Total Secondary Packaging Impact					
Description	Net avoided emissions of the Willhaben marketplace	The emissions of new comparable products, when accounting for the number of products sold.	The proportion of secondhand items bought on Willhaben, which according to the buyers were bought to replace a comparable new item.	The total emissions from deliveries, which are necessary for the secondhand items to reach their buyers.	The total emissions from business operations, meaning the emissions necessary to operate Willhaben and enable people to buy and sell secondhand items.	The total emissions from secondary packaging, meaning the packaging elements used when shipping the items.					
Calculation	Total result	Avoided Emissions from the Reference Scenario. This is a negative number.	Multiplied by the replacement rate	Plus the deliveries impact. This is a positive number.	Plus the operations impact. This is a positive number.	Plus the packagng impact. This is a positive number.

				The average replacement rate within the category based on the Level 1 category.	The number of products sold within the category level available. Usually, this is Level 4, occasionally Level 5.	The number of sold products where the transaction took place on-platform.	The number of sold products where the transaction took place off-platform.	Average net avoided emissions per product, which accounts for the avoided emissions of the reference scenario, and the added emissions of operations, delivery, and packaging.	Total net avoided emissions resulting from the on-platform transactions.	Total net avoided emissions resulting from the off-platform transactions.	Avoided emissions per product, which accounts for the avoided emissions of the reference scenario, and the added emissions of operations, delivery, and packaging.	The emissions of a new comparable product would generate, which are then potentially avoided. This number ignores the category-specific replacement rate.	The emissions of a new comparable product would generate, which are then potentially avoided. This number ignores the category-specific replacement rate.	The emissions generated by the delivery of an average product in this category, which are then potentially avoided. This number ignores the category-specific replacement rate.	The emissions generated by the delivery of an average product in this category, which are then potentially avoided. This number ignores the category-specific replacement rate.	The emissions generated by the delivery of an average product in this category, which are then potentially avoided. This number ignores the category-specific replacement rate.	The emissions generated by the delivery of an average product in this category, which are then potentially avoided. This number ignores the category-specific replacement rate.	The emissions generated by the delivery of an average product in this category, which are then potentially avoided. This number ignores the category-specific replacement rate.	The total emissions of new comparable products from deliveries, when accounting for the number of products sold and the replacement rate.	The total emissions from deliveries. Average deliveries impact per sold product multiplied by product sold.	Total emissions from off-platform deliveries.	Total emissions from off-platform deliveries.	The total emissions from operations, based on Withlauer's corporate carbon footprint.	The total emissions from packaging, based on Withlauer's corporate carbon footprint.

The average replacement rate within the deepest category level available. Usually this is Level 4, occasionally Level 3.				The number of category sold within the deepest category level available. Usually this is Level 4, occasionally Level 3.				The number of sold products where the transaction took place on platform.				The number of sold products where the transaction took place off platform.				Average net avoided emissions per product multiplied by number of products sold.				Total net avoided emissions resulting from the on platform transactions.				Total net avoided emissions resulting from the off platform transactions.				Avoided emissions per product, which accounts for the avoided emissions of the reference scenario, and the avoided emissions per product multiplied by number of products sold.				The emissions of a new comparable product would generate, which are the potentially avoided. This number prones the category specific replacement rate.				The emissions generated by the delivery of an average product in this category, multiplied by the number of products sold.				The emissions generated by the packaging of an average product in this category, multiplied by the number of products sold.				The total emissions of new comparable products, when accounting for the number of products sold and the replacement rate.				The total emissions from deliveries. Average deliveries impact per product multiplied by products sold.				Total emissions from off-platform deliveries.				Total emissions from on-platform deliveries.				The total emissions from packaging. Average packaging impact per product multiplied by products sold.				The total emissions from packaging. Average packaging impact per product multiplied by products sold.

p				On Platform and Off Platform										Results per Sold Product					Total Results				
				Average Replacement Rate	No. of Sold Products	No. of Sold Products On Platform	No. of Sold Products Off Platform	Total Net Avoided tCO2e	Total Net Avoided On-Platform tCO2e	Total Net Avoided Off-Platform tCO2e	Average Net Avoided per 'Sold Product' tCO2e	Reference scenario without Replacement Rate tCO2e	Reference Scenario Cradle-to-Consumer per 'Sold Product' tCO2e	Average Deliveries Impact per 'Sold Product' tCO2e	Average Business Operations Impact per 'Sold Product' tCO2e	Average Secondary Packaging Impact per 'Sold Product' tCO2e	Reference Scenario: Total Cradle-to-Consumer tCO2e	Total Deliveries Impact tCO2e	Total Deliveries Impact (on platform) tCO2e	Total Deliveries Impact (off platform) tCO2e	Total Business Operations Impact tCO2e	Total Secondary Packaging Impact tCO2e	
Category Level 1	Category Level 2	Category Level 3	Category Level 4	%	The number of products sold within the category level available. Usually this is Level 4, occasionally Level 3 category.	The number of sold products within the transaction took place on platform	The number of sold products within the transaction took place off platform	Average net avoided emissions per product multiplied by number of products	Total net avoided emissions resulting from the on-platform transactions	Total net avoided emissions resulting from the off-platform transactions	Avoided emissions per product, which accounts for the avoided emissions of the reference scenario, and the additional emissions of delivery, and packaging	The emissions a new comparable product would generate, which are then potentially avoided. This ignores the category-specific replacement rate.	The emissions a new comparable product would generate, which are then potentially avoided. This ignores the category-specific replacement rate.	The emissions generated by the delivery of an average product in this product category. Expressed in grams of CO2e.	The emissions generated by operating the marketplace divided by the number of products sold	The emissions generated by the packaging of an average product in this category.	The total emissions of new comparable products, when accounting for the number of products sold and the replacement rate.	Average deliveries from on-platform deliveries.	Total emissions from off-platform deliveries.	Total emissions from on-platform deliveries.	The total emissions from operations, based on Wilbur's corporate carbon footprint.	The total emissions from packaging impact per sold product multiplied by products sold.

p				Average Replacement Rate		No. of Sold Products		Key Insights		No. of Sold Products		On Platform and Off Platform		Average Net Avoided per 'Sold Product'		Reference scenario without Replacement Rate		Results per Sold Product		Reference Scenario: Cradle-to-Consumer per 'Sold Product'		Average Deliveries Impact per 'Sold Product'		Average Business Operations Impact per 'Sold Product'		Average Secondary Packaging Impact per 'Sold Product'		Reference Scenario: Total Cradle-to-Consumer		Total Deliveries Impact		Total Deliveries Impact (On-platform)		Total Deliveries Impact (Off-platform)		Total Business Operations Impact		Total Secondary Packaging Impact	
Category Level 1	Category Level 2	Category Level 3	Category Level 4	%	The number of products sold within the category level 3, occasionally Level 4.	The number of sold products within the category level 3, occasionally Level 4.	The number of sold products within the category level 3, occasionally Level 4.	The number of sold products within the category level 3, occasionally Level 4.	Average net avoided emissions per product, which are then multiplied by the number of products sold.	Average net avoided emissions per product, which are then multiplied by the number of products sold.	Total net avoided emissions resulting from the on-platform transactions.	Total net avoided emissions resulting from the off-platform transactions.	Average Net Avoided per 'Sold Product'	Reference scenario without Replacement Rate	The emissions a new comparable product generates, which are then potentially avoided. This ignores the category-specific replacement rate.	The emissions a new comparable product generates, which are then potentially avoided. This ignores the category-specific replacement rate.	The emissions generated by the delivery of an average product in this category, expressed in grams of CO2e.	The emissions generated by operating the marketplace divided by the number of products sold.	The emissions generated by the packaging of an average product in this category.	The total emissions of new comparable products, when accounting for the number of products sold and the replacement rate.	The total emissions from deliveries.	Total emissions from on-platform deliveries.	Total emissions from off-platform deliveries.	The total emissions from operations, based on Withburn's corporate carbon footprint.	The total emissions from packaging, based on Withburn's corporate carbon footprint.

p				Key Insights					On Platform and Off Platform			Results per Sold Product				Total Results							
Category Level 1	Category Level 2	Category Level 3	Category Level 4	Average Replacement Rate	No. of 'Sold Products'	No. of 'Sold Products' On Platform	No. of 'Sold Products' Off Platform	Total Net Avoided tCO2e	Total Net Avoided On-Platform tCO2e	Total Net Avoided Off-Platform tCO2e	Average Net Avoided per 'Sold Product' gCO2e	Reference scenario without Replacement Rate gCO2e	Reference Scenario: Credit-to-Consumer per 'Sold Product' gCO2e	Average Deliveries Impact per 'Sold Product' gCO2e	Average Business Operations Impact per 'Sold Product' gCO2e	Average Secondary Packaging Impact per 'Sold Product' gCO2e	Reference Scenario: Total Credit-to-Consumer tCO2e	Total Deliveries Impact tCO2e	Total Deliveries Impact (On platform) tCO2e	Total Deliveries Impact (Off platform) tCO2e	Total Business Operations tCO2e	Total Secondary Packaging tCO2e	
The average replacement rate within the category, based on the Level 1 category.				%	The number of products sold within the category level available. Usually this is Level 4, occasionally Level 3.		The number of sold products where the transaction took place on platform	The number of sold products where the transaction took place off platform	Average net avoided emissions per product multiplied by number of products sold	Total net avoided emissions resulting from the on-platform transactions	Total net avoided emissions resulting from the off-platform transactions	Avoided emissions per product, which accounts for the reference scenario, and the emissions avoided by delivery, and packaging	The emissions a new comparable product would generate, which are then potentially avoided. This number ignores the category-specific replacement rate	The emissions a new comparable product would generate, which are then potentially avoided. This number ignores the category-specific replacement rate	The emissions generated by the delivery of an average product in this product category. Expressed in grams of CO2e	The emissions generated by operating the marketplace divided by the number of products sold	The emissions generated by the packaging of an average product in this category	The total emissions of new comparable products, when accounting for the number of products sold and the replacement rate	The total emissions from deliveries	The total emissions from on-platform deliveries	The total emissions from off-platform deliveries	The total emissions from operations. Based on Withholders' corporate carbon footprint	The average packaging impact per sold product multiplied by products sold

Category as provided by Wilthaus				The average replacement rate within the category, based on the Level 1 category.	The number of products sold within the category level 3, occasionally Level 4.	The number of sold products where the transaction took place on-platform.	The number of sold products where the transaction took place off-platform.	Average net avoided emissions per product, which accounts for the avoided emissions of the reference scenario, minus the added emissions of operations, delivery, and packaging.	Total net avoided emissions resulting from the on-platform transactions.	Total net avoided emissions resulting from the off-platform transactions.	Avoided emissions per product, which accounts for the avoided emissions of the reference scenario, minus the added emissions of operations, delivery, and packaging.	The emissions generated by the delivery of an average product in this category, which are then potentially avoided. This ignores the category-specific replacement rate.	The emissions generated by the delivery of an average product in this category, which are then potentially avoided. This ignores the category-specific replacement rate.	The emissions generated by the delivery of an average product in this category, which are then potentially avoided. This ignores the category-specific replacement rate.	The emissions generated by the delivery of an average product in this category, which are then potentially avoided. This ignores the category-specific replacement rate.	The emissions generated by the delivery of an average product in this category, which are then potentially avoided. This ignores the category-specific replacement rate.	The emissions generated by the delivery of an average product in this category, which are then potentially avoided. This ignores the category-specific replacement rate.	The total emissions of new comparable products, when accounting for the number of products sold and the replacement rate.	The total emissions of new comparable products, when accounting for the number of products sold and the replacement rate.	Total emissions from on-platform deliveries.	Total emissions from off-platform deliveries.	The total emissions from operations, based on Wilthaus' corporate carbon footprint.	The total emissions from packaging, based on Wilthaus' corporate carbon footprint.

The average replacement rate available within the category based on the Level 1 category.					The number of products sold within the category level is this Level 4, occasionally Level 3.					The number of sold products within the transaction took place on-platform.					The number of sold products within the transaction took place off-platform.					Average net avoided emissions per product multiplied by number of products sold.					Total net avoided emissions resulting from the on-platform transactions.					Total net avoided emissions resulting from the off-platform transactions.			
Avoided emissions per product, which accounts for the avoided emissions of the reference scenario, net of the avoided emissions of operations, and packaging.					The emissions a new comparable product would generate, which are then potentially avoided. This number ignores the category-specific replacement rate.					The emissions a new comparable product would generate, which are then potentially avoided. This number ignores the category-specific replacement rate.					The emissions generated by the delivery of an average product in this category. Expressed in grams of CO2e.					The emissions generated by operating the marketplace divided by the number of products.					The emissions generated by the packaging of an average product in this category.								
The total emissions from packaging. Average packaging impact per sold product multiplied by products sold.					The total emissions from deliveries. Average deliveries impact per sold product multiplied by products sold.					The total emissions from operations. Based on Withlams corporate carbon footprint.					The total emissions from packaging. Average packaging impact per sold product multiplied by products sold.					The total emissions from packaging. Average packaging impact per sold product multiplied by products sold.					The total emissions from packaging. Average packaging impact per sold product multiplied by products sold.

Category as provided by Wilhelmsen				The average replacement rate within the category based on the Level 1 category.				The number of products sold within the category level 3, occasionally Level 2.				The number of sold products where the transaction took place on-platform.				The number of sold products where the transaction took place off-platform.				Average net avoided emissions per product multiplied by number of products sold.				Total net avoided emissions results from the on-platform transactions.				Total net avoided emissions results from the off-platform transactions.				Avoided emissions per product, which accounts for the avoided emissions of the reference scenario, added emissions of operations, delivery, and packaging.				The emissions a new comparable product would generate, which are then potentially avoided. This ignores the category-specific replacement rate.				The emissions generated by the delivery of an average product in this category. Expressed in grams of CO2e.				The emissions generated by operating the marketplace divided by the number of products sold.				The emissions generated by the packaging of an average product in this category.				The total emissions of new comparable products, when accounting for the number of products sold and the replacement rate.				The total emissions from deliveries.				The total emissions from on-platform deliveries.				The total emissions from off-platform deliveries.				The total emissions from operations.				The total emissions from packaging.

p				Average Replacement Rate	No. of Sold Products	Key Insights		On Platform and Off Platform		Average Net Avoided per Sold Product	Reference scenario without Replacement Rate	Results per Sold Product		Average Deliveries Impact per Sold Product	Average Business Operations Impact per Sold Product	Average Secondary Packaging Impact per Sold Product	Reference Scenario: Total Cradle-to-Consumer	Total Results				
Category Level 1	Category Level 2	Category Level 3	Category Level 4			No. of Sold Products On Platform	No. of Sold Products Off Platform	Total Net Avoided tCO2e	Total Net Avoided On-Platform tCO2e			Total Net Avoided Off-Platform tCO2e	Total Deliveries Impact tCO2e					Total Deliveries Impact (on-platform) tCO2e	Total Deliveries Impact (off-platform) tCO2e	Total Business Operations Impact tCO2e	Total Secondary Packaging Impact tCO2e	
The average replacement rate within the category level available. Usually based on the Level 1 category.				%	The number of products sold within the category level 3, occasionally Level 4.	The number of sold products where the transaction took place off-platform.	The number of sold products where the transaction took place on-platform.	Average net avoided emissions per product, which accounts for the avoided emissions of the reference scenario. This figure ignores the category-specific avoided emissions of operations, delivery, and packaging.	Total net avoided emissions resulting from the on-platform transactions.	Total net avoided emissions resulting from the off-platform transactions.	Average Net Avoided per Sold Product	Reference scenario without Replacement Rate	The emissions generated by the delivery of an average product in this category. Expressed in grams of CO2e.	The emissions generated by operating the marketplace divided by the number of products sold.	The emissions generated by the packaging of an average product in this category.	The total emissions of new comparable products, when accounting for the number of products sold and the replacement rate.	The total emissions from deliveries. Average deliveries impact per sold product multiplied by products sold.	Total emissions from on-platform delivery.	Total emissions from off-platform delivery.	The total emissions from operations. Based on Withlams corporate carbon footprint.	The total emissions from packaging. Average packaging impact per sold product multiplied by products sold.

Category as provided by Wilthabern	Category as provided by Wilthabern	Category as provided by Wilthabern	Category as provided by Wilthabern	The average replacement rate within the category based on the Level 1 category	The number of products sold within the deepest category level available. Usually this is Level 4, occasionally Level 3.	The number of sold products where the transaction took place on-platform	The number of sold products where the transaction took place off-platform	Average net avoided emissions per product multiplied by number of products sold	Total net avoided emissions resulting from transactions	Total net avoided emissions resulting from the off-platform transactions	Avoided emissions per product, which accounts for the avoided emissions of the reference scenario, and the added emissions of operations, delivery, and packaging.	The emissions a new comparable product would generate, which are then potentially avoided. This number ignores the category-specific replacement rate.	The emissions a new comparable product would generate, which are then potentially avoided. This number ignores the category-specific replacement rate.	The emissions generated by the delivery of an average product in this product category. Expressed in grams of CO2e.	The emissions generated by operating the marketplace divided by the number of products sold.	The emissions generated by the packaging of an average product in this category.	The total emissions of new comparable products, when accounting for the number of products sold and the replacement rate.	The total emissions from deliveries. Average deliveries impact per sold product multiplied by products sold.	Total emissions from off-platform deliveries.	Total emissions from on-platform deliveries.	The total emissions from operations, based on Wilthabern's corporate carbon footprint.	The total emissions from packaging. Average packaging impact per sold product multiplied by products sold.
